

m RESTORE MOTION™

Restore Motion is committed to providing exceptional Orthopedic Rehab and Surgical products to our customers. Our goal is to ensure the highest service and patient satisfaction in the industry.

- Hands-On patient Instruction
- 24 Hour Patient Support
- Large Product Line
- Medicare Accredited | Verify Patient Benefits

HANDS-ON PATIENT INSTRUCTION

Restore Motion provides complete, personalized instruction to the patient utilizing written, bilingual protocols (as indicated by the treating physician) for both surgical and non-surgical orthopedic applications. The benefits of this personalized instruction provides for improved patient compliance, which facilitates better treatment outcomes.

Restore Motion's trained Orthopedic DME Technicians deliver and fit the perscibed medical devices in the hospital, clinic, outpatient surgical center, physician's office or the patient's home.

To ensure ongoing continuity of care for the patient, the Orthopedic DME Technicians will assist in the application of our products in the recovery room and will continue observing their progress in both the acute rehabilitative setting and in their home.

PATIENT SUPPORT

Restore Motion provides a patient support team whose primary focus is patient follow-up. This support is available 24/7. As simple as it may sound, ensuring that the patient understands how to use his or her equipment properly goes a long way to ensuring successful patient outcomes.

Our internal patient support team provides continual telephone support on a 24-hour basis. Their comprehensive and continuous training by industry professionals provides our staff with the knowledge and experience required to properly and thoroughly instruct the patient and provide targeted support throughout the episode of care.

The Orthopedic DME Technician can provide the following:

- Pre-operative training and support to both patient and caregiver
- Delivery and fitting of the device on the patient pre-operatively or post-operatively
- Continued follow-up with the patient during their hospitalization and then in their own home
